

Communicate

MS Teams Voice

Communicate MS Teams Voice

Key Features and Benefits

Enable your staff to leverage your existing MS Teams environment to receive and make calls to anyone, from anywhere, using any device.

✔ Seamless

No need to change your Microsoft 365 licensing arrangement. We seamlessly work with your IT Team or MSP to deliver the solution.

✔ Scalable

Need more call capacity (or less)? Changes can be made in hours, with no disruption to your existing system.

✔ Flexible Solutions

You don't have to go exclusively with MS Teams Calling. Keep some staff on our Hosted UC, while other staff (regardless of location) can utilise MS Teams for voice communications.

✔ Transferable

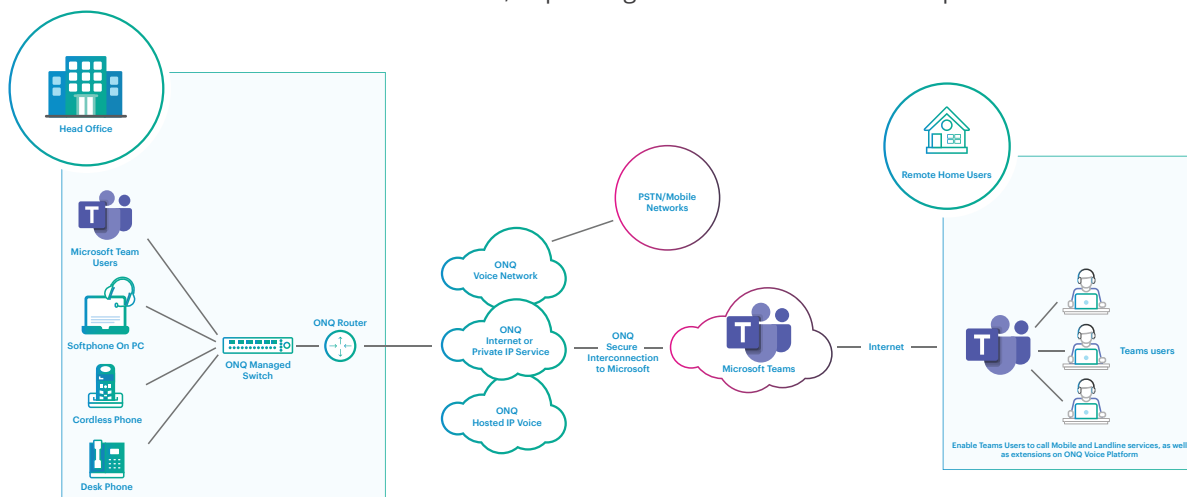

Already have existing numbers? No problem. We can arrange a planned transfer, ensuring minimal disruption to your business.

✔ Deployment Options

Use the MS Teams client on either PC, or mobile. Alternatively, leverage MS Teams certified Handsets.

How MS Teams Voice works

Our MS Teams Voice service adds the capability for Teams users to make and receive telephone calls to and from standard numbers, such as landline and mobiles. This enables Teams to be used as your phone system, or in a hybrid model, with users spread across both Teams and ONQs Unified Communication service, depending on location and feature requirements.

Redefining the way **Business Telco** in Australia should be.
