# Connectivity 4G/LTE Backup

## Key Features and Benefits

To ensure your business connectivity never skips a beat, ONQ's 4G / LTE backup service is there to provide the ultimate peace of mind, even if your primary service does miss a beat or two or even a whole playlist!

### ✔ Flexible

ONQs Backup 4G service works with either your existing network or our Private IP WAN service.

### ✔ Transparent and Automatic

Our Managed Router will automatically switch to 4G (in less than 60 seconds) in the event your primary service fails. Better still, your IP remains the same.

### ✔ Alternative Path

4G provides a diverse physical path into your business, avoiding disruption due to cable damage or cuts.

### ✔ No Disruptions

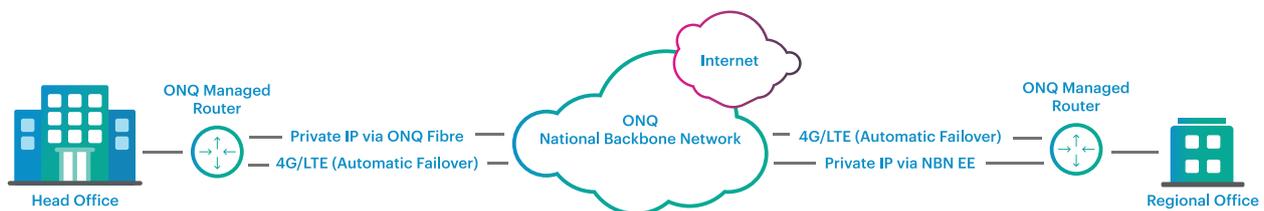

Keep business critical services online, such as Voice and EFTPOS.

### ✔ Outdoor Option

In an area where coverage isn't that great? We have options for professional installation with external antennas, ensuring reliability and performance.

## How 4G Backup Service works

Our 4G Backup Service delivers the ultimate in connectivity resiliency, by providing a backup route via an alternative technology. In the event of a failure of your primary service, our Managed Router will automatically detect and re-route traffic, enabling your business to continue to function without intervention.

Redefining the way Business Telco in Australia should be.

We are Australia's most trusted telecommunications partner for businesses that demand reliability above everything else.
