Content Filtering

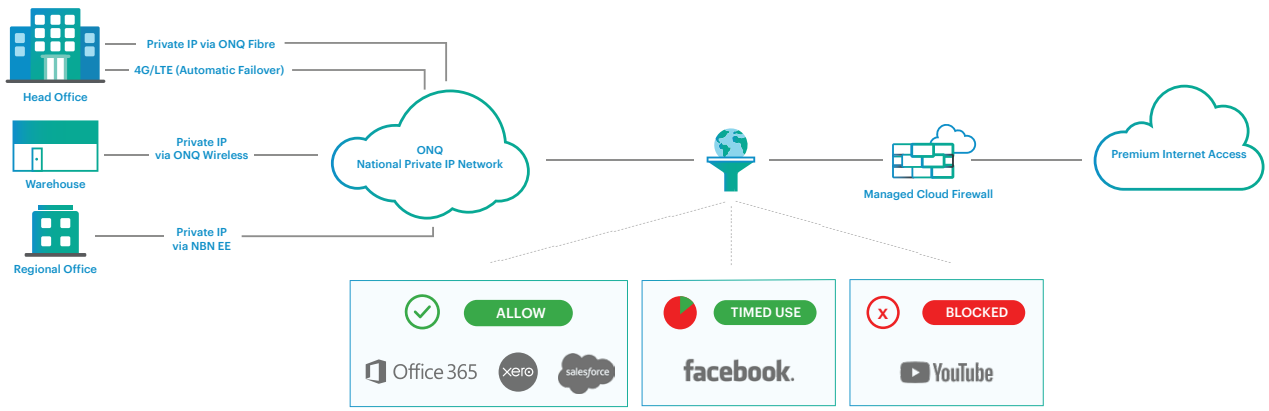
Key Features and Benefits

ONQ can help you to apply Content Filtering policies to control what occurs on your business or education network.

- **Granular Control**
  Control what content your users visit and when. Block inappropriate or illegal content and improve security.
- **Visibility and Reporting**
  Historic and Realtime reporting, with the capability to observe per user (or per device) access to authorised and blocked content.
- **Efficiency Improvements**
  Without the distraction of illegal or unnecessary time wasting content, watch your staff productivity soar!
- **Tailored Control**
  Exceptions allow tiered access for some users while not others providing you with ultimate control.
- **Fully Managed**
  We remove the complexity of having to manage and update on premise equipment for an all-inclusive monthly charge.

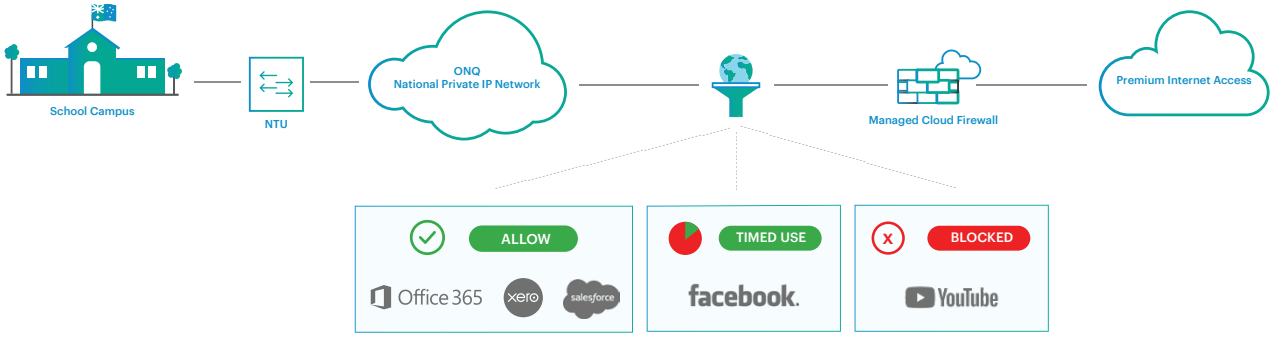
How Content Filtering works for **Multiple Sites**

Our Content Filtering for multiple sites is deployed in the ONQ Core, in-line with the Managed Firewall for your Private IP Network. Such a topology ensures a single ingress/egress filtering location between the Internet and internal network, with the added benefit of removing the requirement for additional hardware on site.



How Content Filtering works for a **Single Site**

Our Content Filtering for a single site is hosted within the ONQ Core, increasing reliability and ease of updates, by removing the onsite hardware appliance requirement.



Redefining the way Business Telco in Australia should be.

ONQ Communications

We are Australia's most trusted telecommunications partner for businesses that demand reliability above everything else.
